

ACCUTITE

**EVERYTHING YOU NEED TO KNOW
ABOUT ACCUTITE**

DR. AARON STANES

DR AARON STANES

Dr Aaron is an internationally trained and highly respected cosmetic physician with extensive experience in cosmetic medicine.

He has pursued multiple post-graduate qualifications, and has worked in well-regarded hospitals around Australia as a medical doctor.

He will always strive for no less than the best, and put your safety as a priority.

He frequently works alongside one of Australia's top cosmetic surgeons and trains other medical practitioners in cosmetic medicine around Australia.

Dr Aaron has perfected his approach to AccuTite, and is one of the most sought-after Cosmetic Physicians in Australia for this procedure.

TELL ME MORE...

Do away with sagging eyelid skin, eye bags and wrinkles with the Accutite non surgical eyelid lift.

Eyelid surgery (blepharoplasty) has until recently been the go-to treatment for the many people concerned about droopy upper eyelids, or eye bags and poor skin quality. This meant choosing between expense, downtime, risk and scars, or doing nothing.

Now, those that are concerned about looking tired, old and saggy around the eyes have a non surgical alternative.

Accutite uses unidirectional targeted heating to tighten deeper tissue. When combined with radiofrequency microneedling skin tightening, there is no other non surgical option that can achieve a total rejuvenation of the eyelids.

A tiny probe is gently inserted under the skin after the area has been numbed. The probe emits radiofrequency energy that heats the deeper tissues in a very precise manner. This heat causes immediate contraction in the skin, fat and supporting tissues, and the body produces collagen to improve the results over the next 3-6 months.

- Safe, comfortable, and done in under an 45 minutes.
- Affordable, non surgical alternative to an eyelid lift.
- Improve both the upper and lower eyelids, and improve eye bags, all with just one treatment.
- Surgical like results, without cutting. Local anaesthetic ensures minimal discomfort.
- Minimal downtime, with most people back to work in 3-4 days.
- Can be combined with PDO mono threads, radiofrequency microneedling, biostimulating injections and dermal fillers for unparalleled results.

Dr Aaron is passionate about facial rejuvenation without surgery. He has focussed his education and clinical practice on developing the best approaches and treatment combinations to get nothing but the best results.

NON SURGICAL VS. SURGICAL EYELID LIFT

Non surgical eyelid lifting has become extremely popular. Its many advantages over surgery have led to more and more people exploring this non surgical alternative. Compared to surgery, it is more affordable, there is less discomfort and downtime, there is no cutting or scarring, and the skin itself is rejuvenated.

Other non surgical modalities such as plasmage simply don't compare. They rely on burning the outer layer of the skin, which can cause hyperpigmentation. There is also no improvement in the deeper tissue layers that are the main contributors to the sagging skin.

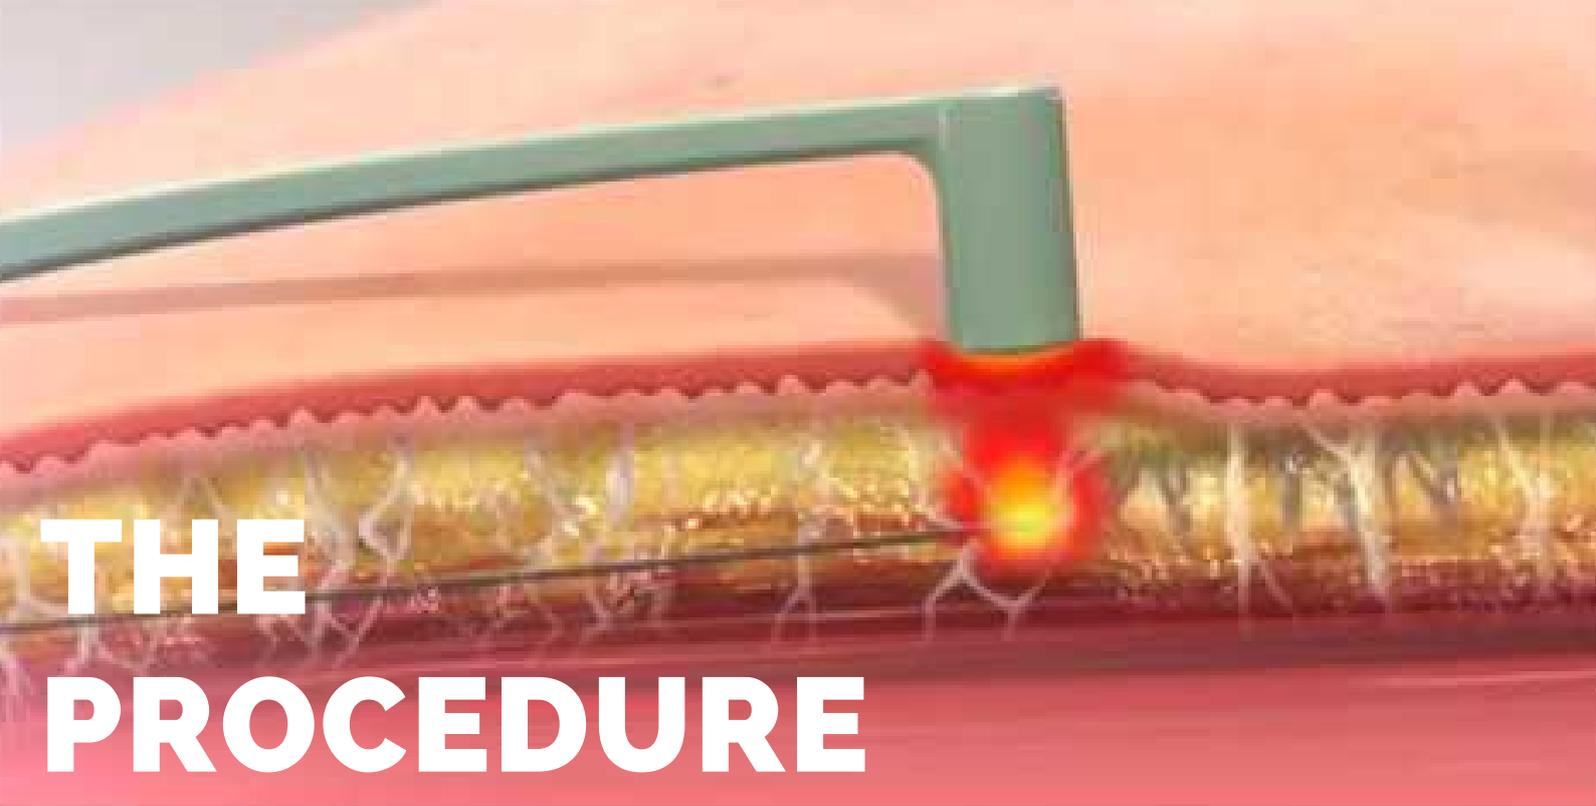

Accutite has essentially replaced all other methods of eyelid rejuvenation. The only exception being those with severe skin laxity and sag. However in these cases, the Accutite can be used in combination with traditional surgery.

Accutite is minimally invasive, and takes less than an hour to do both upper and lower eyelids. Results continue to improve over 3-6 months as the skin tightens and new collagen is produced. No foreign materials such as filler and threads are injected, rather Accutite simply relies on precision heating from the inside.

Accutite uses radiofrequency energy to precisely heat deeper tissues of the eyelids, causing a significant tightening effect. There is no need for cutting and scarring as is the case with traditional eyelid surgery.

Accutite is more affordable, and has less downtime of eyelid surgery.

Accutite leads to collagen stimulation, meaning the skin quality of the eyelids will improve. Traditional eyelid surgery leaves the remaining skin in an aged condition.

THE PROCEDURE

What is Accutite?

Accutite is a minimally invasive (without cutting) eyelid lifting procedure. It uses a tiny probe introduced under the skin to precisely heat deeper tissues leading to skin tightening, collagen production and a comprehensive rejuvenation of the upper and lower eyelids. It is ideal for those concerned about sagging upper and lower eyelid skin or eyebags, and who want to avoid surgery. It is performed in clinic with local anaesthetic. Almost all patients find the procedure to have minimal discomfort.

Is Accutite worth it?

Accutite has had an enormous amount of positive feedback since its inception. The low risk, low cost, low downtime and low discomfort, combined with the long term tissue benefits are all reasons why Accutite can be of value to you. Even better, if eventually you want eyelid surgery, Accutite will get your skin and tissue in great condition, meaning better potential results from surgery!

Is Accutite right for me?

If you are concerned about sagging eyelid skin and eyebags, then you could be an ideal candidate for the Accutite treatment. Without any invasive surgery, you can achieve a fresh and rejuvenated look, and significantly improve the quality and tightness of your eyelid skin.

SAFETY

Is Accutite safe?

There are minimal risks with the Accutite procedure. Bruising and swelling will occur in almost all people. Rarely, there may be a temporary injury to the nerves around the eyes, but this resolves on its own after a few weeks.

When can I exercise after Accutite?

You can generally return to strenuous exercise a week after your Accutite treatment. This allows time for swelling to settle to ensure the quickest recovery possible. You are able to partake in gentle exercise such as walking from the day following your treatment.

5 THE RESULTS

How long do Accutite results last?

Rejuvenation of the eyelids from Accutite can last from 5-7 years.

Does Accutite have any downtime?

Accutite is a low downtime procedure. Most people are back at work after 3-4 days.

Is Accutite better than eyelid surgery?

Unlike traditional surgical eyelid lifting, Accutite is more affordable, safer, without scars, and directly improves the quality of the skin. There is also less downtime, and less discomfort during your procedure.

Does Accutite work?

Accutite has a very high satisfaction rate from those that have undergone the procedure. Ensuring the procedure is done by an experienced cosmetic doctor can increase the likelihood of getting a great outcome.

TIME

The procedure takes around 45 mins with 3 days downtime.

PRICE

Prices start from \$3250 depending on area treated.

RESULTS

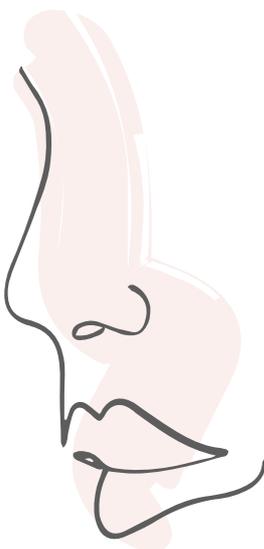

Safe and sterile treatment with no scalpals, stiches or surgery.

COMBINATIONS

Results continue to improve over 6 months and last between 5-7 years. Some benefits are lifelong.

OTHER TREATMENTS TO COMPLIMENT YOUR PROCEDURE

Lip fillers

Under Eye Augmentation

Cheek Contouring

Jawline Contouring

Thread Lift
